

Powder Burn Rate Chart

265 powders listed from fast to slow.

The chart of relative quickness of powders below is intended as a guideline only.

Powders within three lines of one another are similar in relative quickness but cannot be directly substituted without due regard for safe reloading procedures.

Powders printed in blue are believed to be close to the correct relative position in the chart.

Powders printed in green are no longer manufactured and **powders in red** are not yet reliably placed in position on the chart. Their positions may still change.

WARNING!

Listed burn rates are approximate. Numerous variables preclude the possibility of exact burn rate comparisons.
Exercise proper handloading techniques and safety precautions at all times when handloading ammunition.
